

Identification\_Information:

Description:

Abstract:

Motor Vehicle Use Maps (MVUMs) covering a total of 8 districts across two national forests and two grasslands are now available in a garmin GPS raster map format (.img). They can be found on the U.S. Forest Service PSICC website at: [www.fs.usda.gov/psicc](http://www.fs.usda.gov/psicc). After arriving at the main page, click on "Maps and Publications", and then click on "Motor Vehicle Use Maps".

These Garmin-compatible maps can be downloaded from the website and loaded into any Garmin mapping unit. The best results can be obtained by loading the MVUM maps onto a microSD card in an SD-compatible Garmin unit. They can also be loaded directly into the internal memory of a Garmin mapping unit.

Each map is constructed in a GeoTiff format from the original ArcMap.mxd and then converted into an .img file. Once loaded into a Garmin unit, the WGS 1984 georeferenced image of the MVUM will be displayed whenever the map is enabled on the map information page through the Garmin setup menu. A GPS user can use the map to navigate along the roads and trails shown on the map.

These maps are not intended to replace the hard-copy MVUMs, so users should NOT rely solely on the Garmin information. Hard copy MVUMs should also be referenced to obtain additional important information regarding travel on the PSICC.
